NOTICE OF ALLOWABILITY

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

1. It is the opinion of the examiner that the art of record (considered as a whole) neither anticipates nor renders obvious "a link attached solely to the mediate regions of the first and second members, and extending on the same side of the connecting means as the jaws, the link having a post projecting from the link and extending intermediate the jaws for forming wire around the post, wherein the post is free to move both radially towards and away from the connecting means to permit formation of generally circular loops with various gauges of wire" in combination with the rest of the claimed limitations set forth in the independent claim.

Further searching by the examiner yielded additional prior art as follows:

2. Knoester (U.S. Patent # 2,824,583) discloses a loop or eye forming pliers having a first and second member (tongs, See col. 2, line 16) each having a jaw (1, 2), a handle (handles 4, 5) and a mediate region (See FIGS below); a connecting means (common pivot 3) for securing the first and second members together at the mediate region and for permitting pivoting movement between the first and second members while locating the jaws on the same side of the connecting means such that the jaws are opposed to each other and free to move towards and away from each other (See FIGS below); a link (plate 10), attached to the mediate region (See FIGS below) of the first and second members (tongs) and to links (15, 16) thereby allowing a rectilinear movement only (See col. 2, lines 38-41), having a post (core pin 13) projecting from the link (plate 10) and projecting intermediate to the jaws (1, 2) for forming wire around the post.

3. However the above cited prior art fails to disclose a "link attached solely to the mediate region" and "wherein the post is free to move both radially towards and away from the connecting means to permit formation of generally circular loops with various gauges of wire." Therefore, it is concluded that claim 1 of the present invention is allowable subject matter over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The following prior art is made of record as showing the state of the art of applicant's invention.

1. U.S. Patent # 5,520,227 to Kelley discloses a tool for forming controlled bends in wire, and;

2. U.S. Patent # 3,861,430 to Story discloses a wire forming hand tool
